User Manual of Wftpd32

WFTPD32.exe is the application software used for upgrading the firmware of DVR/DVS. When using it for the first time, we should prepare the corresponding configurations. The process is as follows:

1、Double click wftpd32.exe，the following window is displayed:

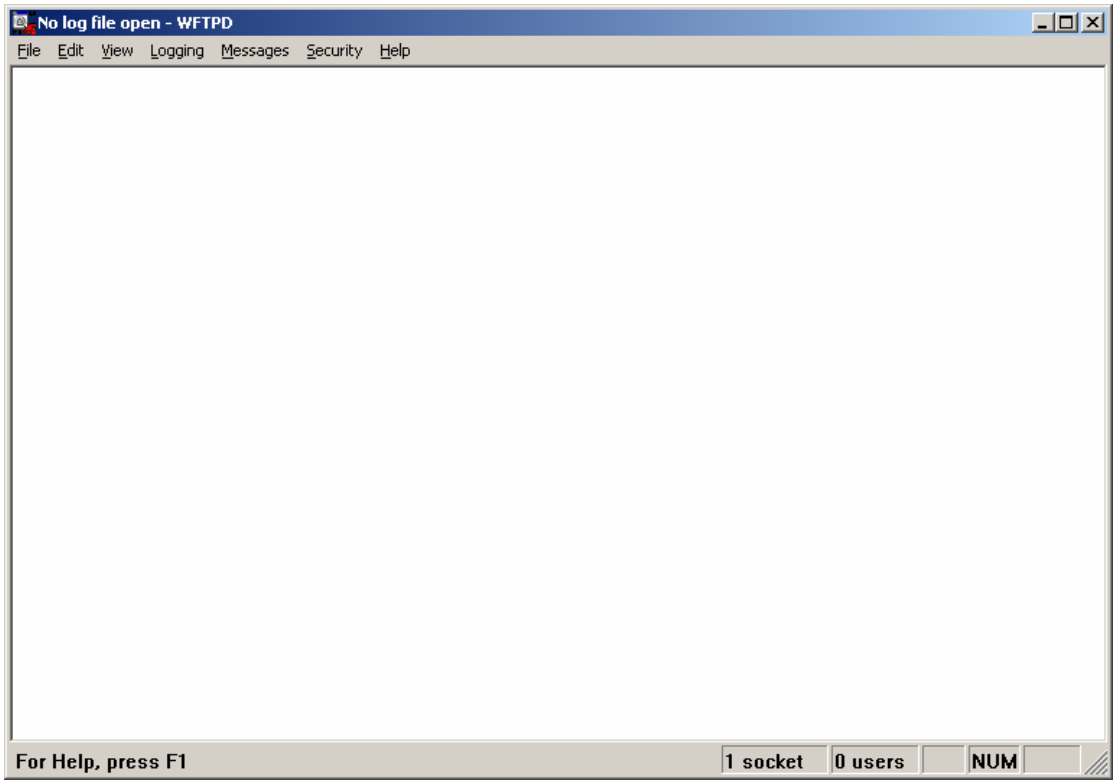

Fig. 1

2、Select “Logging” in the menu，choose Log Options in the sub menu, and give the choice as Fig.2：

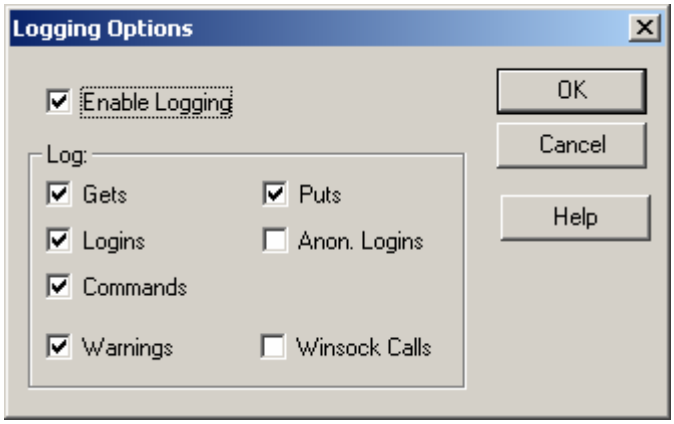

Fig.2

Click OK key to store your choice.

3、Select “Security” in the Menu, select “Users/Right….”in the sub-menu, the pop-up dialog box as follows：

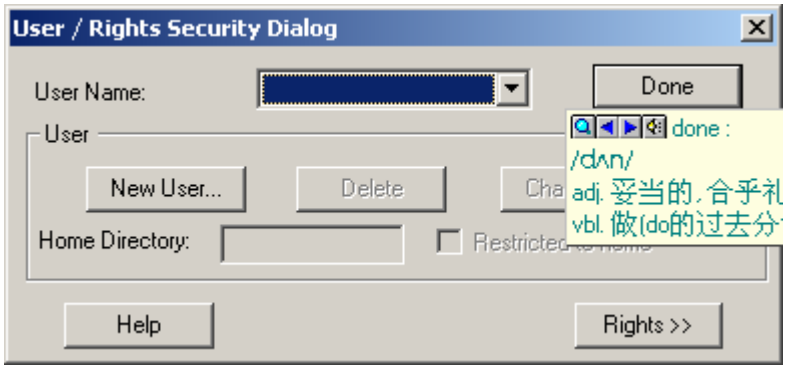

Fig. 3

4、Select “New User…”key in the above dialog box, input “target” in the pop-up dialog box，store your choice after click “OK” key. Please refer to Fig. 4：

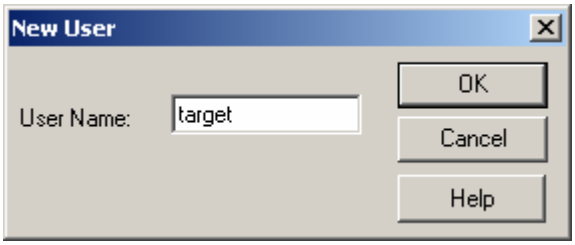

Fig. 4

5、New dialog box will be pop-up after clicking “OK” key. The password is required to be input. Please input “target” and click “OK”, defined as Fig. 5：

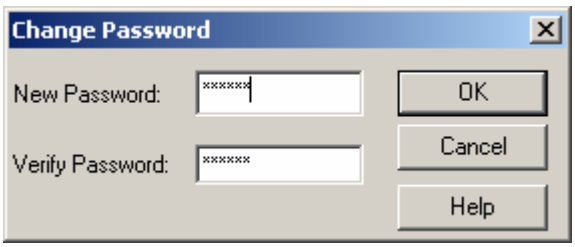

Fig. 5

6、It will return back to Fig. 3 after clicking “OK” in Fig. 5. Input the directory path which contains the DVR/DVS firmware such as “digicap” in the corresponding dialog editing box of Home Directory in Fig. 3 (for example: c:\firmware), as in the following (Fig. 6):

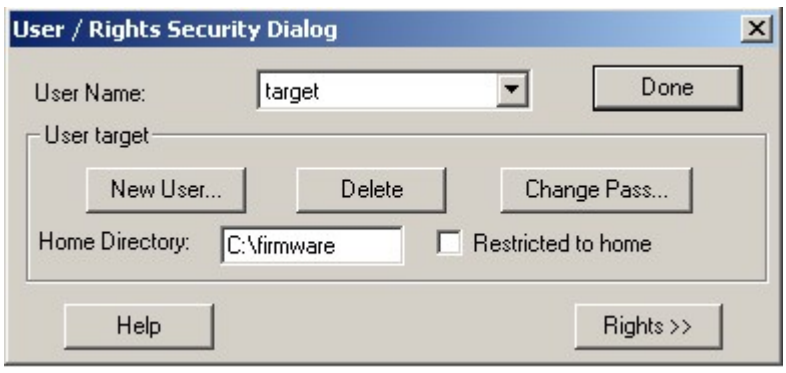

Fig. 6

Click “Done” to save all the configuration.

7、Next time, you need not setup again, just double click and open “wftpd32.exe” to upgrade the DVR/DVS firmware.
